SUMMARY

Full-stack developer specializing in React, Vite, Node.js, and Firebase with production experience building real-time financial data systems and secure APIs. Strong focus on scalable Firestore data modeling, secure-by-default architecture, and LLM integrations using Anthropic, OpenAI, and OpenRouter in production. Experienced in shipping fast while maintaining clean code, audit-grade security, and async documentation standards.

EDUCATION

B.Eng. in Computer Science and Engineering — CUET, Chittagong

Coursework: Software Engineering, DSA, OS, Networking, Machine Learning, AI, OOP, Information Security

March 2022 – May 2026 (expected)

EXPERIENCE

Founding Engineer

January 2026 – Present

[Mudrag](#) • Dhaka, Bangladesh (Remote)

- Architected full-stack FD rate aggregation platform across 10+ banks using **React, Vite, Node.js, and Firebase Firestore**; designed scalable data models with sub-200ms queries and real-time investment pipelines.
- Secured all endpoints with **RBAC, JWT, encryption, and audit logging**; applied secure-by-default practices across Firebase Auth, Functions, and Storage from day one.
- Shipping LLM-based share price prediction feature in production using **Anthropic, OpenAI, and OpenRouter APIs**; developed with Claude Code and Cursor for AI-accelerated delivery.

Software Engineer Intern

May 2025 – December 2025

[Poridhi.io](#) • Remote

- Built production-grade auth service implementing **full OIDC + OAuth2 flows on Node.js** with JWT session management, token rotation, and secure refresh logic.
- Owned Docker + GitHub Actions CI/CD pipelines across distributed teams; shipped course demos iteratively with clear async documentation aligned to sprint deadlines.

Frontend Developer

November 2024 – March 2025

[The Tork](#) • Dhaka, Bangladesh (On-Site)

- Delivered 5+ client products end-to-end in **React.js, Next.js, and Vue.js** — from spec to deployment — averaging under 2 weeks per project across simultaneous engagements.

MAJOR PROJECTS

FastAPI Connection Pool MVP [\[GitHub\]](#) Python, FastAPI, PostgreSQL

- Achieved ~3x throughput and 100% success rate under 100+ concurrent requests; **clean OOP architecture** separates pool management, query execution, and routing full HTTP error coverage for exhaustion and timeouts.

Recommender System [\[GitHub\]](#) Python, TypeScript, Node.js, Docker

- Collaborative filtering + content-based ML pipeline exposed via TypeScript REST API; modeling, scoring, and routing in independently testable layers Dockerized for reproducible CI builds.

CertiMark-RAG: Context-Aware RAG Watermarking [\[Thesis\]](#) Python, PyTorch, LangChain, FAISS, HuggingFace

- RAG watermarking framework with FAISS-indexed retrieval, **LLM API integration**, and Hybrid Uncertainty Metric (HUM); detection pipeline resilient to paraphrasing and adversarial edits.

TECHNICAL SKILLS

Core Stack: React, Vite, Node.js, Express.js, Firebase (Firestore, Auth, Functions, Hosting, Storage), PostgreSQL

Languages: JavaScript (ES6+), TypeScript, Python, C++, SQL

AI & LLM Tools: Anthropic, OpenAI, OpenRouter, Gemini; RAG systems; Claude Code, Cursor; NLP (LSTM, DistilBERT)

Security: OAuth2, OIDC, JWT, RBAC, audit logging, encryption, secure-by-default API design

DevOps & Cloud: Docker, GitHub Actions, CI/CD, AWS (S3, Lambda, SageMaker), Ngix

PUBLICATIONS & ACHIEVEMENTS

- **Mind_Matrix at CQs-Gen 2025** — *ACL Anthology (ArgMining, Vienna)* — Jul 2025 — LLM pipeline with quantized model + semantic similarity. Ranked 7th internationally.
- **Mental Health Detection Using LSTM and DistilBERT** — *IEEE ICCIT 2025* — Dec 2025 — Hybrid NLP framework with SHAP and LIME explainability.
- Ranked 21st — NAACL 2025 NLP Shared Task (top 25 worldwide). 500+ competitive programming problems Codeforces, LeetCode, UVA.
